

SINTOFOIL RC

Description

Synthetic waterproofing membrane produced by co-extruding a UV resistant elastomerised TPO/FPA thermoplastic olefin and flexible polypropylene alloy with a synthetic inorganic composite reinforcing mat. The membrane features contrasting colours on its upper and lower faces, providing a signal layer so that any damage occurring during or after installation will be immediately apparent. Also available in Reflecta White version with the upper side of the membrane (top) manufactured with the Reflecta White treatment, developed in mass in the entire layer that covers the top of the reinforcement. This process enhances the reflectance and emission features giving the waterproof covering Solar Reflectance Index (SRI) values that reach 102%. SINTOFOIL RC membranes comply with CE marking requirements, if applicable.

System certifications

QMS certification according to ISO 9001.

Product certifications

Regulation CPR 305/2011/EU.

FM certification.

EELAB certification.

This product can contribute to acquiring points in terms of LEED accreditation.

Fields of application

Specific use

- Mechanically retained waterproofing for:
 - exposed roofs.
- Waterproof layers applied independently under heavy-duty fixed or movable protection for:
 - roofing exposed to foot and vehicular traffic;
 - inverted roofs.

Note: Given the versatility and reliability of SINTOFOIL membranes, other applications can be developed with the assistance of the IMPER ITALIA srl – Rubberfuse Division Technical Services.

Application

Sintofoil membranes are designed for easy bonding with a hot air gun, as no adhesives or other materials of any kind are required. Design solutions and application methods are illustrated in the technical manual published by the RUBBERFUSE Division. Waterproofing systems employing SINTOFOIL membranes should be laid by installers authorised by RUBBERFUSE Division Technical Services.
